Manufacturer: GE Druck
Product: DPI 320, 325, 330 and 335
Category: Product Obsolescence
Date: 01/13/11
Subject: Products No Longer Available

Due to significant manufacturing problems and difficulty obtaining suitable parts, we can no longer continue production of the DPI 320, 325, 330 and 335 and with regret, these products are being made obsolete. This product obsolescence takes effect immediately and we cannot accept new orders.

For many customers the DPI 620 series can provide a more advanced and higher accuracy alternative. For example, a PV 622 based system for pneumatic applications to 100 bar in place of the DPI 320 and 325 and a PV 623 based system for hydraulic applications to 1000 bar replacing the DPI 330 and 335. There are many advantages to the DPI 620 systems including accuracy, long term stability and size/weight, plus all the advanced features of HART communication, Windows CE and WiFi connectivity will enable customers to realize significant inventory reductions, reduced cost of ownership and productivity improvements going forward.
